## TECHNICAL CHARACTERISTICS

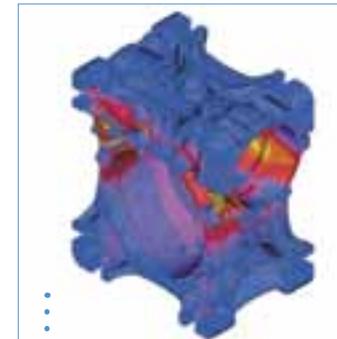

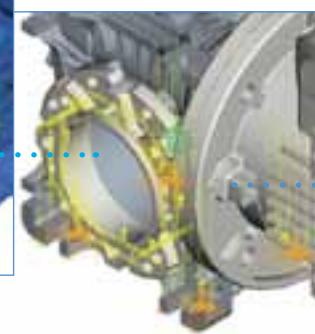

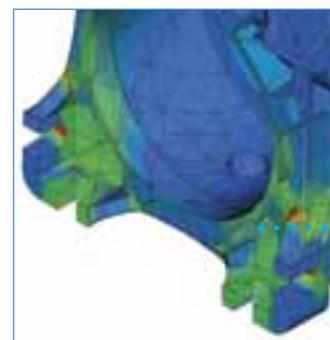

From type 75 and up, 2 taper roller bearings are mounted on the wormshaft, improving the mechanical resistance to the axial loads given by the wormwheel.

Moreover, the combination of this characteristic and 2 nilos (mounted on size 75 and up to keep lubrication grease inside the bearings even when they are not touched by the oil bath), or, in alternative, special RS shields on such taper bearings, permits the mounting of the whole BOX range, from the size 25 to the size 150, in the positions V5 and V6 without any need of additional interventions.

The new patented "BOX" series of worm gear units is made with die-casting aluminium housing from size 25 up to 90, and in cast iron from size 110.

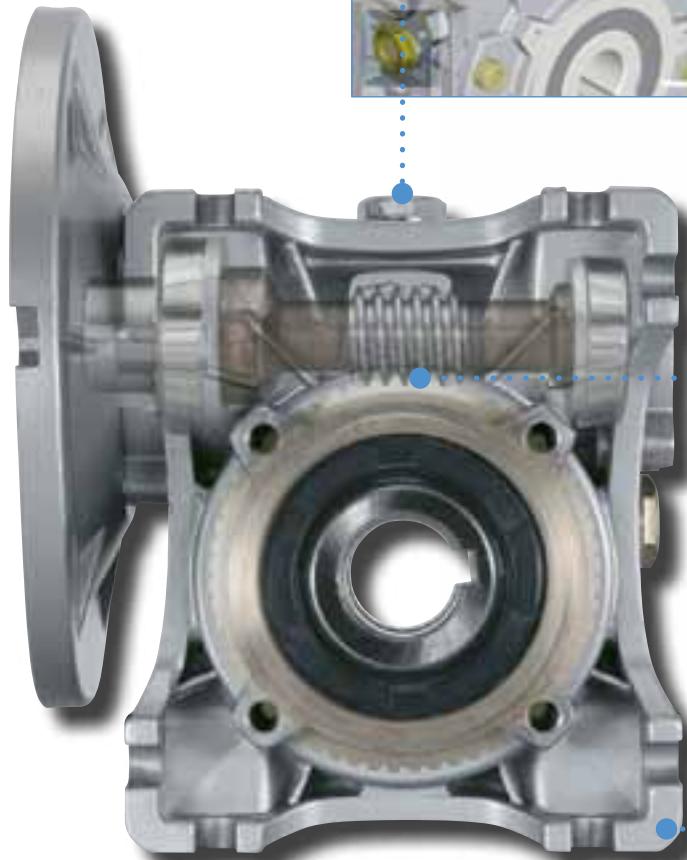

The housing has been designed with parametric three-dimensional CAD SW supported by programs of analysis of the thermal dissipation capacity and the structural resistance/deformation under the effect of working loads.

The housing shape has been studied to optimize the water draining during washing.

Mounting positions B6 or B7 are also permitted on all the BOX series, thanks to the adoption of 2RS auto-lubricated bearings on the output gear. In conclusion, the whole BOX series can be mounted in any position with no need of specifications in the order.

## TECHNICAL CHARACTERISTICS

Mating surfaces are machined for a perfect planarity.

Lubrication is already provided by motive with long-life synthetic oil up to size BOX90, and with mineral oil from size BOX110.

The gear unit is equipped with a full set of filler, level and breather plugs, permitting all mounting positions and facilitating the management of the stock.

In order to increase silence, efficiency and duration, the wormshaft is made in case hardened steel and ground machined, while the worm wheel is in shell cast ZCuSn12 bronze.

Before being assembled, the worm wheel is submitted to a running-in working period to improve the surface finishing and hardness.

An epoxy paint coat cancels the negative effects of the aluminium porosity and protects the housing from oxidation.

2 safety plastic covers on the output are always provided to protect BOX during transportation and storage, and then the user from accidental contacts with moving parts

## REGISTERED DESIGN

## EFFICIENCY

An inherent factor in the selection of wormgear boxes is the efficiency  $\eta$ , defined as the ratio between the mechanical power coming out from the output shaft, and the power in the input shaft:

$$\eta = \frac{P_{n2}}{P_{n1}}$$

Some reasons concurring to a reduction of the efficiency can be identified in the several forms of sliding and rolling friction.

In practice, efficiency depends essentially by:

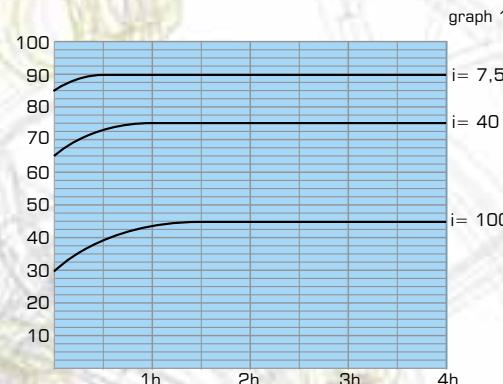

- helix angle
- material of matching parts
- tooth form accuracy
- gear finishing
- lubrication
- gear sliding speed
- load vibrations
- temperature

In the combined BOX units (BOX+BOX), the total efficiency value is the result of the product of the efficiency of the two single boxes composing the combined unit.

### Dynamic efficiency $\eta_d$

It is the efficiency value that comes out after completion of the running in time of a few hours and that keeps almost constant in the subsequent time of work.

The graph 1 shows indicatively the time required to reach the maximum value of dynamic efficiency

### Static efficiency $\eta_s$

It is the efficiency obtained at start-up, particularly important in the choice of a BOX unit on those applications (like liftings) where due to the very restricted time of work for each operation, the standard operating conditions are reached seldom. In these applications it is necessary to increase properly the motor power, in order to compensate the poor efficiency of the BOX unit while starting up ( $\eta_s < \eta_d$ ).

## IRREVERSIBILITY

Some BOX units permit to lock and hold in place a load when electric power switches off.

This characteristic, called irreversibility, is inversely proportional to the efficiency and the helix inclination, and directly proportional to the reduction ratio.

The efficiency of the tooth profiles is the main factor in effecting successfully the whole efficiency of the wormgear units, and it is on a large extent tied to the helix angle of profiles.

In order to get the fittest solution for a certain application, it is necessary to analyse the difference between static and dynamic irreversibility.

### Static irreversibility

A BOX unit has a low static reversibility whenever it is possible to put it in rotation only through driving the output shaft with a very high torque and/or vibration or twisting of the output load. The static irreversibility is inversely proportional to the static efficiency. Theoretically:

|                        |                           |
|------------------------|---------------------------|
| $\eta_s < 50\%$        | static irreversibility    |
| $50\% < \eta_s < 55\%$ | low static reversibility  |
| $\eta_s \geq 55\%$     | good static reversibility |

### Dynamic irreversibility

This is the most difficult condition to get. It occurs whenever, at the stop of the conditions keeping the worm shaft in rotation, even the motion of the output shaft stops immediately. The dynamic irreversibility is inversely proportional to the dynamic efficiency. Theoretically:

|                        |                               |
|------------------------|-------------------------------|
| $\eta_d < 40\%$        | total dynamic irreversibility |
| $40\% < \eta_d < 50\%$ | good dynamic irreversibility  |
| $50\% < \eta_d < 60\%$ | low dynamic reversibility     |
| $\eta_d \geq 60\%$     | good dynamic reversibility    |

**The table 1 proposes an indicative analysis of the different degrees of irreversibility based on the helix angle.**

Note: Whenever a total irreversibility of a BOX unit is important for safety reasons, we strongly recommend the use of brake motors of the AT Delphi series.

## LUBRICATION

Unless otherwise specified, BOX units sizes 25 up to 90 are supplied with long-life lubrication and they don't require any maintenance.

BOX110, BOX130 and BOX150 are already pre-lubricated as well, with mineral oil VG460.

The use of oil instead of grease offers remarkable improvements under the point of view of the application, especially in the effectiveness and efficiency of the lubrication in the "limit layer" condition as well as under high intermittence applications.

Furthermore, synthetic oil lubrication assures a much wider range of low and high operating temperatures.

With the use of synthetic oil, the temperature limits turn out to be determined by the properties of the seal material as well as the thermal expansion of the frame material.

All units are supplied with plugs for loading, discharging and checking the level of the oil. Furthermore, the units

BOX063, BOX075, BOX090, BOX110, BOX130 and BOX150 are accompanied by a breather plug. Before start-up, we suggest to re-place the filler plug in the upper side of the unit with the breather plug. This operation is compulsory on BOX110, 130 and 150.

The combination on the input shaft of 2 taper roller bearings (mounted on size 75 and up to get an high resistance to the axial loads) and 2 nilos (mounted on the unit sizes 75 up to 150 to keep lubricating grease inside the bearings even when they are not touched by the lubrication oil) or, in alternative, special RS shields on such taper bearings, permits the mounting of the whole BOX range, from the size 25 to the size 150, in the positions V5 and V6.

Mounting positions B6 or B7 are also permitted on all the BOX series, thanks

tab. 3

to the adoption of 2RS auto-lubricated bearings on the output shaft.

In conclusion, the whole BOX series can be mounted in any position with no need of specifications in the order.

## MOUNTING POSITIONS

Like all connectable motive motors and gearboxes, STADIO is supplied by Motive with synthetic oil suitable for the whole lifetime. No maintenance requested.

## TECHNICAL DATA

### **Rated output torque $M_{n2}$ [Nm]**

Torque output transmissible under uniform loading and referred to the input speed  $n_1$  and the corresponding output speed  $n_2$ .  
The output torque can be calculated with the following formula:

$$M_{n2} = \frac{P_{n1} [\text{kW}] \cdot 9550}{n_2} \cdot \eta_d$$

### **Torque demand $M_{r2}$ [Nm]**

Torque calculated based on application requirements. It must be  $\leq M_{n2}$  of the chosen BOX unit.

### **Input power $P_{n1}$ [kW]**

This is the power value of the motor applied to the input shaft and corresponding to a certain input speed  $n_1$ , a service factor  $f_s = 1$  and a duty service  $S_1$ .

It is even possible to calculate the motorsize necessary by using the formula:

$$P_{n1} [\text{kW}] = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_d}$$

Since the value calculated in this way could not really correspond to an input power actually available in the IEC standardised motors, it will be necessary to choose, among the input powers available, the one which is immediately higher, checking this in the Motive catalogue of the motors.

### **Gear ratio $i$**

It is the relationship of the input speed  $n_1$  and the output speed  $n_2$

$$i = \frac{n_1}{n_2}$$

In the BOX units with pre-stage reduction (BOX+STADIO), the total ratio

is given by the PC pre-stage reduction ratio multiplied by the BOX unit ratio. In the combined BOX units (BOX+BOX), the total ratio is the result of the product of the ratio of the two single boxes composing the combined unit.

### **Input speed $n_1$ [rpm]**

It is the speed the BOX unit is driven at.

### **Output speed $n_2$ [rpm]**

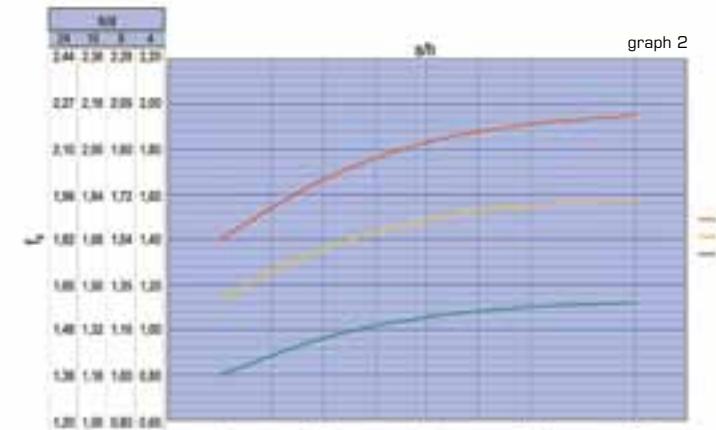

It is the rotation speed of the output shaft.

### **Service factor $f_s$**

It is a numeric value describing the BOX unit service duty. With unavoidable approximation, it takes into consideration:

- the daily working hours **h/d**
- the load classification (see table 2), and then the moment of inertia of the driven masses.
- The number of starts per hour **s/h**
- The presence of brake motors, for which it is necessary to multiply for 1.12 the service factor value deducted by the graph 2.
- The significance of the application in terms of safety, for example lifting of parts

In the graph 2, the service factor  $f_{sr}$  required by a certain application can be attained, after having selected the proper "daily working hours" (h/d) column, by intersecting the number of starts per hour (s/h) and one of the a, b or c curves. The curves a, b and c are linked with the load classification described in the table 2.

tab. 2

| load classification   | application   |
|---|---|
| <b>c</b><br>uneven operation, heavy loads, larger masses to be accelerated                                  | conveyors with violent jerks; compressors ad alternate pumps with 1 or more cylinders; machinery for bricks, tiles and clay; kneaders; milling machines; lifting winches with buckets; rotting furnaces; heavy fans or mining purposes; mixers for heavy materials; machine-tools; planing kinds; alternating saws; shears; tumbling barrels; vibrators; shredders; turntables  |
| <b>b</b><br>starting with moderate loads, uneven operating conditions, medium size masses to be accelerated | belt conveyors with varied load with transfer of bridge trucks for light duty; levelling machines; shakers and mixed for liquid with variable density and viscosity; machines for the food industry (kneading troughs, mincing machines, slicing machines, etc); sifting machines for sand gravel; textile industry machines; cranes, hoists, goodstiffs; fertilizer scrapers; concrete mixers; folding machines; winches; crane mechanisms |
| <b>a</b><br>easy starting, smooth operation, small masses be accelerated                                    | belt conveyors for light material; centrifugal pumps; rotary gear pumps; screw feeders for light materials; lifts; bottling machines; auxiliary controls of tool machines; fans; power generators; fillers; small mixers  |

If, after the selection of the right  $M_{r2}$  and  $n_2$  in the following performance tables, you don't find a BOX unit whose service factor  $f_s$  is  $\geq$  of the requested one  $f_{sr}$ , you can choose a BOX unit in which  $M_{n2} > M_{r2}$ .

In fact, in order to satisfy  $f_{sr}$ , you can choose another BOX unit whose output torque is  $\geq M_{c2}$  output torque, where:

$$M_{c2} = M_{r2} \cdot f_{sr}$$

Note: This rule is valid only if the new BOX unit that has been selected in this way has a service factor  $f_s \geq 1$  in the performance tables.

From another point of view, the value of  $f_s$

in the performance tables refers to a case in which the effective torque requested by the application  $M_{r2}$  matches perfectly with the one appearing on the catalogue  $M_{n2}$ . Whenever the torque indicated in the performance table is higher than the requested one, the offered service factor of the performance table can be increased according to the formula:

$$f_s \text{ real} = \frac{f_s \text{ on the table} \cdot M_{n2} \text{ on the table}}{M_{r2}}$$

The value of  $f_s$  calculated in this way must be  $\geq f_{sr}$ .

## BOX PERFORMANCE TABLES

**Design features**

STADIO construction is modular and therefore it can be supplied as a separate unit to be mounted on any type of fitted geared motor (PAM). It is not requested any part pre-mounting on the motor shaft.

Like all connectable motive motors and gearboxes, STADIO is supplied by Motive with synthetic oil suitable for the whole lifetime. No maintenance requested.

Like all connectable gearboxes and motors manufactured by Motive, the whole STADIO range can be mounted in any position with no need of specifications in the order

The efficiency at rated speed is 98%. The starting efficiency is always less than the efficiency at rated speed. The pre-stage unit cannot be used by itself, but only coupled with another reduction unit.

A powder paint coat cancels the negative effects of the aluminium porosity and protects the housing from oxidation.

In order to increase silence, efficiency and duration, gears are made in case hardened (HRC59-63) tempered steel 20CrMnTi (UNI7846) accurately ground on the involute.

**Performance**

| BOX+STADIO           |             | FORMULA                       |
|----------------------|-------------|-------------------------------|
| final ratio          | i:          | = BOX i: x STADIO i:          |
| final service factor | sf          | = BOX sf / 2                  |
| final output speed   | $n_2$ [rpm] | = BOX $n_2$ / STADIO i:       |
| final output torque  | $M_2$ [Nm]  | = BOX $M_2$ x STADIO i: x 98% |
| final efficiency     | hd [%]      | = BOX $\eta_d$ x 98%          |

# TERMS OF SALE AND GUARANTEE

## ARTICLE 1 **GUARANTEE**

1.1 Barring written agreements, entered into between the parties hereto each time, Motive hereby guarantees compliance with specific agreements.

The guarantee for defects shall be restricted to product defects following design, materials or manufacturing defects leading back to Motive.

The guarantee shall not include:

- \* Faults or damages ensuing from transport. Faults or damages ensuing from installation defects; incompetent use of the product, or any other unsuitable use.
- \* Tampering or damages ensuing from use by non-authorised staff and/or use of non-original parts and/or spare parts;
- \* Defects and/or damages ensuing from chemical agents and/or atmospheric phenomena (e.g. burnt out material, etc.); routine maintenance and required action or checks;
- \* Products lacking a plate or having a tempered plate.

1.2 Returns to credit or replace will be accepted only in exceptional cases; however returns of goods already used to credit or replace won't be accepted in any case.

The guarantee shall be effective for all Motive products, with a term of validity of 12 months, starting from the date of shipment.

The guarantee shall be subject to specific written request for Motive to take action, according to statements, as described at

the paragraphs herein below. By virtue of aforesaid approval, and as regards the claim, Motive shall be bound at its discretion, and within a reasonable time-limit, to alternatively take the following actions:

- a) To supply the Buyer with products of the same type and quality as those having proven defective and not complying with agreements, free ex-works; in aforesaid case, Motive shall have the right to request, at Buyer's charge, early return of defective goods, which shall become Motive's property;
- b) To repair, at its charge, the defective product or to modify the product which does not comply with agreements, by performing aforesaid action at its facilities; in aforesaid cases, all costs regarding product transport shall be sustained by the Buyer.
- c) To send spare parts free of charge: all costs regarding product transport shall be sustained by the Buyer.

1.3. The guarantee herein shall assimilate and replace legal guarantees for defects and discrepancies, and shall exclude any other eventual Motive liability, however caused by supplied products; in particular, the Buyer shall have no right to submit any further claims. Motive shall not be liable for the enforcement of any further claims, as of the date the guarantee's term of validity expires.

## ARTICLE 2 **CLAIMS**

2.1. Claims, regarding quantity, weight, gross weight and colour, or claims regarding faults and defects in quality or compliance, and which the Buyer may discover on goods delivery, shall be submitted by a max. 7 days of aforesaid discovery, under penalty of nullity.

## ARTICLE 3 **DELIVERY**

3.1. Any liability for damages ensuing from total or partial delayed or failed delivery, shall be excluded.

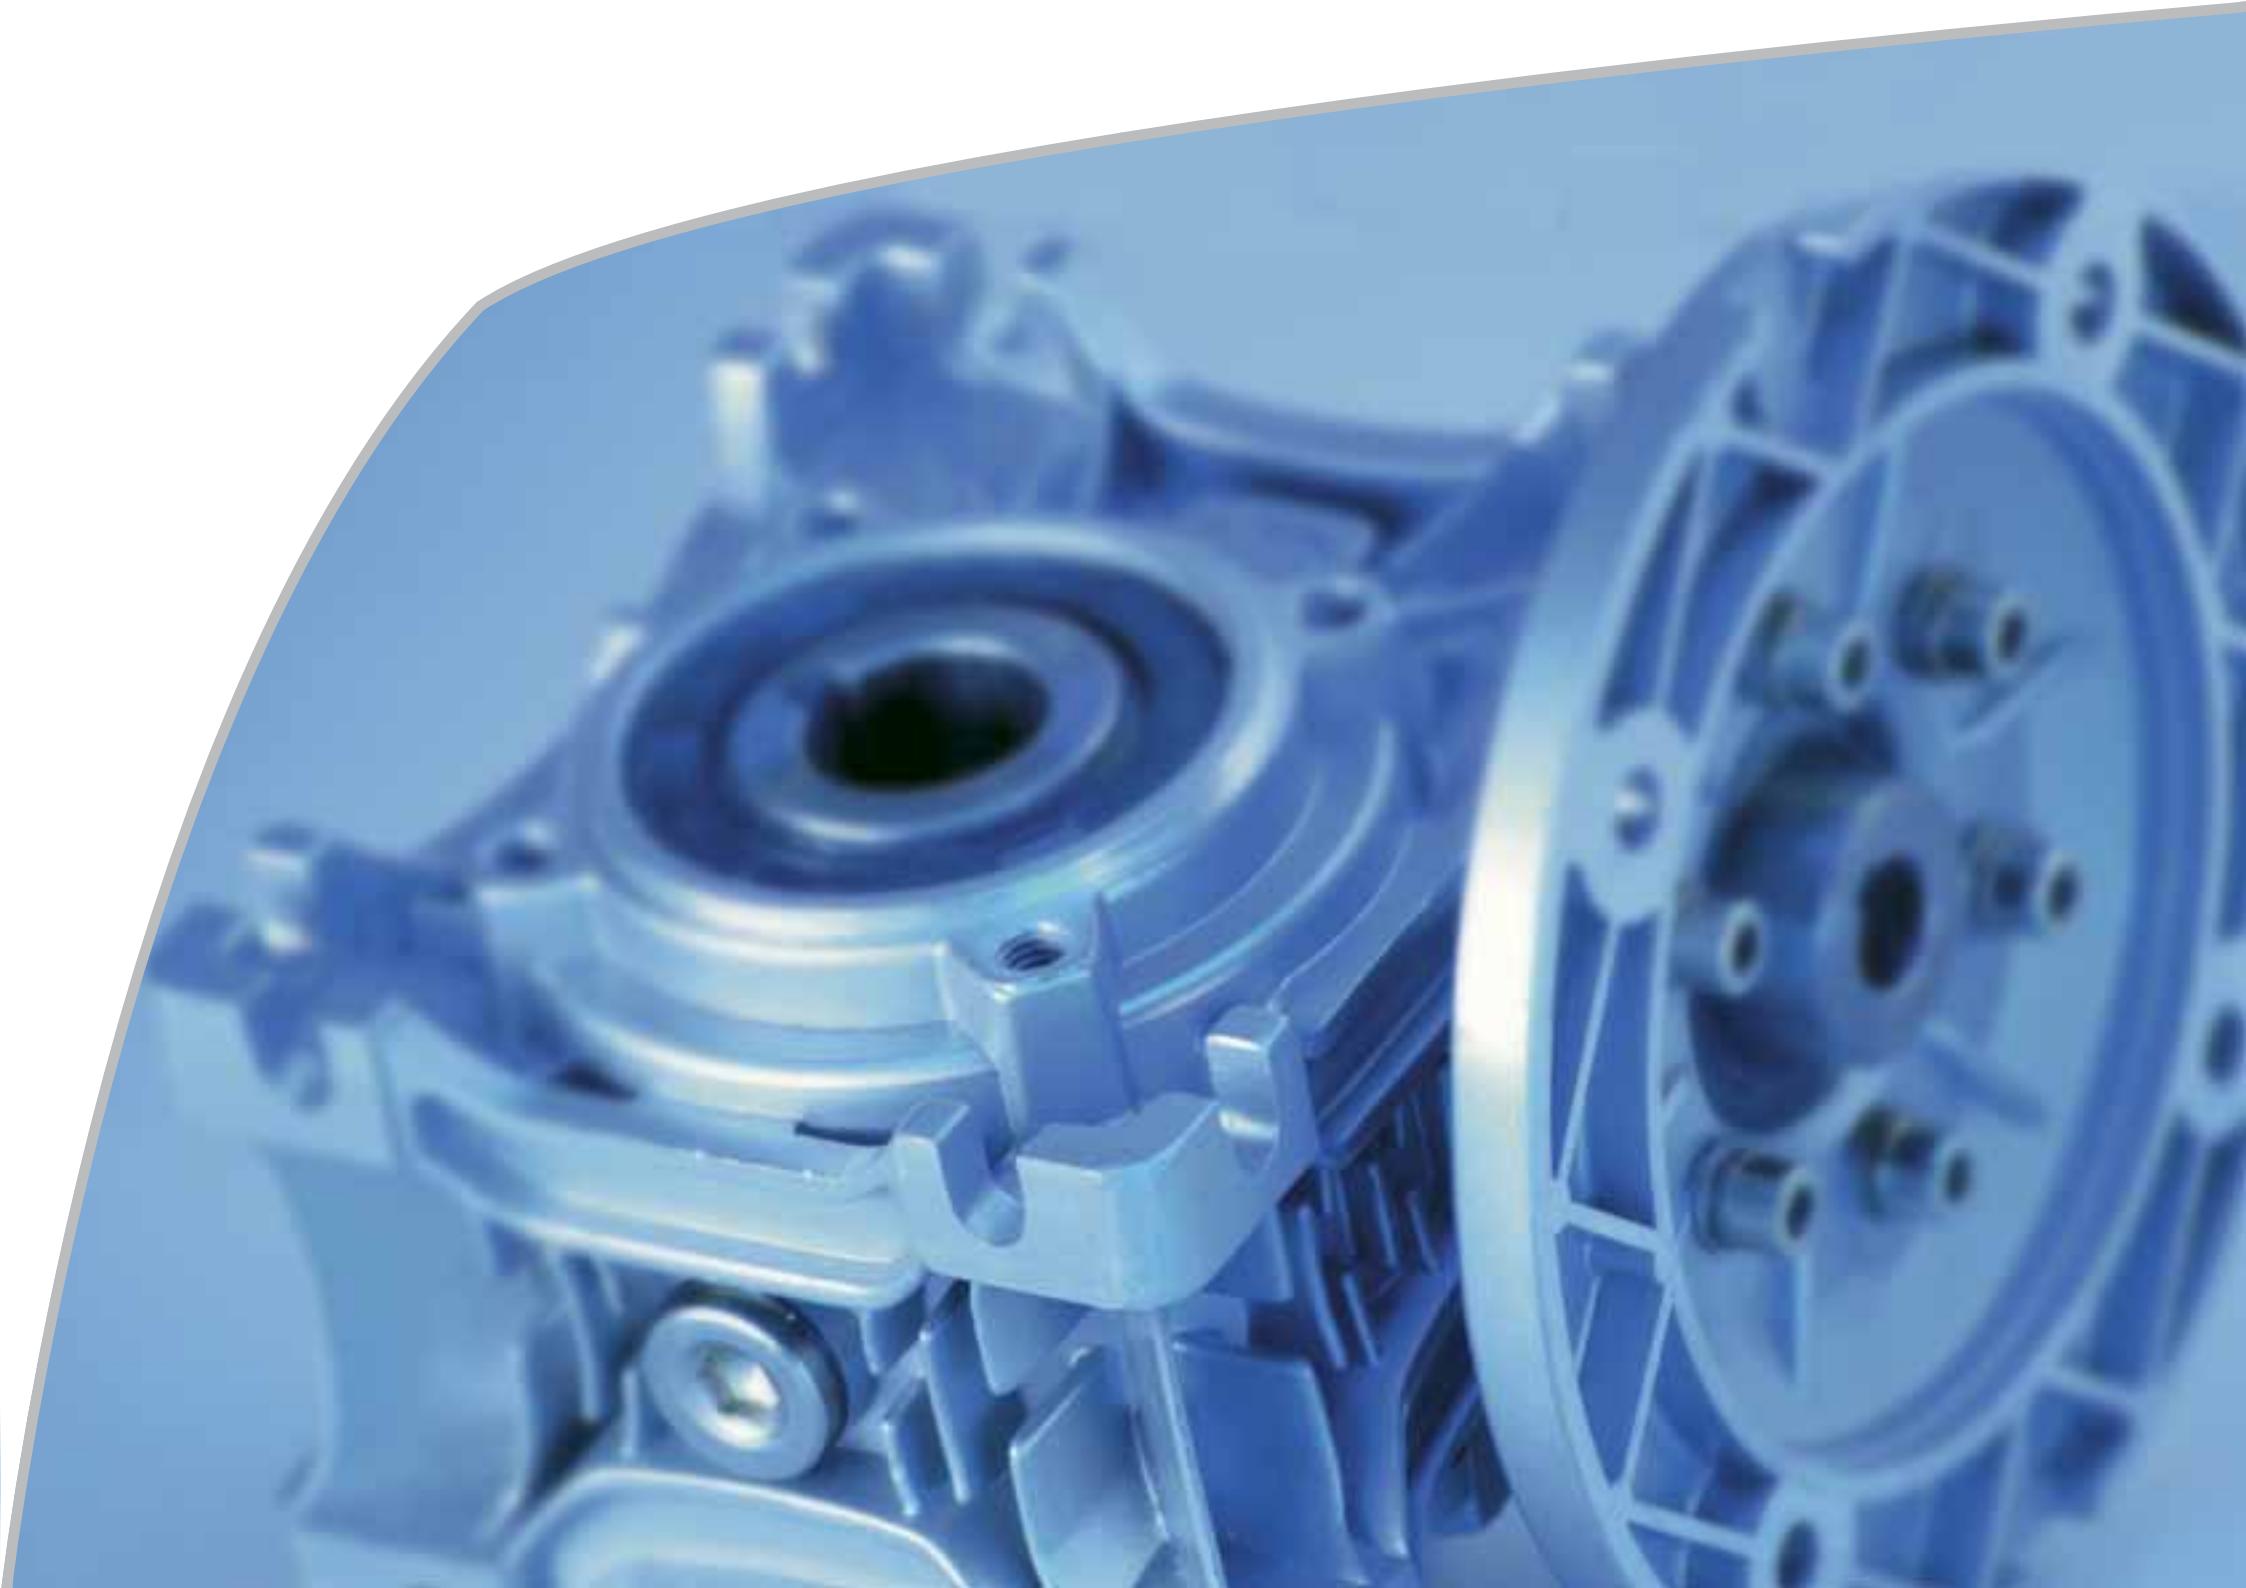

3.2. Unless differently communicated by written to the Client, the transport terms have to be intended ex-works.

## ARTICLE 4 **PAYMENT**

4.1. Any delayed or irregular payments shall entitle Motive to cancel ongoing agreement, including agreements which do not regard the payments at issue, as well as entitling Motive to claim damages, if any. Motive shall, however, have the right, as of payment's due date and without placing in arrears, to claim interest for arrears, to the extent of the discount rate in force in Italy, increased by 5 points. Motive shall also have the right to withhold material under repair for replacement. In the case of failed payment, Motive shall have the right to cancel all guarantees of materials, as regards the insolvent Client.

4.2. The Buyer shall be bound to complete payment, including cases whereby claims or disputes are underway.

ALL DATA HAVE BEEN WRITTEN AND  
CHECKED WITH THE  
GREATEST CARE.  
WE DO NOT TAKE ANY RESPONSIBILITY  
FOR POSSIBLE ERRORS OR  
OMISSIONS.  
MOTIVE CAN CHANGE THE  
CHARACTERISTIC OF THE SOLD  
ITEMS ON HIS FIRM OPINION AND  
IN EVERY MOMENT.
